DECPAC ® Ramp-Lok™ Fitting Instructions

The Ramp-Lok™ locating device can be fitted and used, where deemed appropriate, with ANY DECPAC® ramp.

Warning

- a. Cryocyanate "SuperGlue" can set very quickly and can bond skin together and to other surfaces. Please follow manufacturer's instructions when using this type of adhesive
- b. Use the appropriate protective clothing when working with GRP components and adhesives.

Parts List

- a. 1 x Ramp-Lok™ locating device kit.
- b. 11mm HSS twist drill
- c. Hand or electric drill
- d. Ruler, Scriber & Centre punch.
- e. Appropriate Adhesive.
- f. Small round file for finishing.

Method

- Accurately cut out template below. This will be used to accurately locate the holes in the floor, so ensuring that any other Decpac ramp fitted with Ramp-Lok™ can be interchangeable between vehicles.
- Deploy ramp flat on a suitable table, and align one LONG edge of the template with the TOP end edge of the ramp and centralize template across the 2 middle modules.
 (This step will not be necessary if the Ramp-Lok™ is a factory fitted option).
- Mark holes, using template, in top surface of ramp through the rubber boot, and remove template (retain for further use).
 - NOTE; before drilling holes, use locating bar to check alignment between holes and pins.
- 4. Using an 11mm HSS twist drill, make holes in ramp at marked positions ensuring the drill clears both sides of rubber boot.
- Clean holes with file to remove burrs, check fit of supplied Aluminium inserts and then bond ONE insert into each hole in ramp.
- 6. Using SAME template as used for ramp, repeat marking process on the vehicle step, again aligning long edge of template with edge of step.
- Repeat steps 3, 4 & 5 using other 2 inserts. Ensure holes in vehicle floor are drilled deep enough to allow locating pins to fully insert.
- 8. When adhesive has dried on both ramp and vehicle holes, position ramp in place and check Ramp-Lok™ positioning. The small round file can be used to "ease" aluminium inserts if necessary for smother operation.
